1. Introduction

1.1 Summary

The Pierre Dreyfus building is the last physical remnant of Renault's industrial legacy in Paris, and the cultural memory of the many thousands of workers, and many thousands of hours of labor embedded in the land of Billancourt and Île Seguin. Renault is one of the most recognizable automobile brands in the world, and a torch bearer for French ingenuity. This is a design brief for the proposed Renault History Foundation and Design Museum which will occupy the Pierre Dreyfus building, formerly known as "Bâtiment X," and be further housed in a new contemporary building sharing the same site. These buildings will work in tandem to create a narrative of history and progress, and provide exceptional space for the display of archival material, photography, machinery, and of course, cars.

1.2 Project Objectives

- Open to the public the Pierre Dreyfus Building aka "Bâtiment X," one the last vestiges of Renault's industrial history.
- Make new use of a beautiful early 20th century building set against the rapidly urbanizing context of the neighborhood of Boulogne-Billancourt.
- Add to the area a new educational and entertainment attraction to support and supplement development plans on Île Seguin, which is becoming a veritable arts and culture area.
- Bring awareness to and education of the industrial history of Paris and Renault.
- Tell the story of the Paris labor movement and its effects in Europe and beyond.
- Have a place within the Paris metro area to showcase the wealth of archival assets owned and maintained by Renault.
- Create a beautiful space for the display of historic, iconic, and modern Renault vehicles for public enjoyment.

1.3 Site & Location Summary

The Pierre Dreyfus building is located at 37 Av. Pierre Lefauchaux, in the neighborhood of Boulogne-Billancourt, in southwest Paris. The building itself, which currently serves as additional office space for Renault, lies within a gated area of about 6000 square meters, which is itself within a fuller site of 13,000 square meters. It is hugged by the River Seine to the southwest, and is connected to Île Seguin by Ponte Daydé which becomes Rue Emile Zola, the site's western border.

The site can be accessed on the Billancourt side by the M9 and Bus 42 and on the Meudon and Sèvres side by the T2. Given Billancourt's deep industrial history and now transformation into a wealthy commune of Île de France, the neighborhood is underconnected compared to other areas of Paris hosting large cultural attractions.

The site contains three historic structures of interest: Bâtiment X, Louis Renault's original (reconstructed) workshop, and the original gates to the building.¹ All three must remain as a requirement of this brief. Bâtiment X has already undergone extensive renovation and thus none of its interior is of heritage value, but the historic fabric of the envelope must be preserved. Additionally, the workshop and gates must be protected and remain in their current placements.

Bâtiment X is 80 meters long and approximately 10 meters high, with a footprint of approximately 1500 square meters and a total gross floor area of 3200 square meters.²

The rest of the site is available for development, subject to planning approval.

1.4 Planning History & Key Historic Dates^{3,4,5,6}

- **18th century:** Boulogne-Billancourt is regularly visited by nobility crossing the river. It hosts numerous semi-industrial activities such as laundries that utilize the river.
- **End of 18th century:** Armand Seguin acquires Île Seguin to set up a massive tannery.
- **19th century:** Various openings and closing of industries, and Île Seguin returns to a forested state.
- **1875:** Alfred Renault acquires a residence in Billancourt at the current location of Bâtiment X.
- **1898:** Louis Renault builds his first car in the garden shed.
- **1899:** Renault is founded by the Renault brothers Louis, Marcel, and Fernand.
- **1906:** Renault wins the first Grand Prix motor racing event.
- **1911:** Louis Renault takes over as sole owner of Renault. Renault exhibits the Renault 90 hp, the world's first V12 aircraft engine.
- **1914:** Outbreak of WWI leads Renault to build engines, tanks, and other war machines.
- **1918:** Renault factory space covers 365,000 square meters across Boulogne-Billancourt.
- **1919-1922:** Bâtiment X is constructed within the gardens home to Louis Renault's first workshop.
- **1928:** Bâtiment X becomes the official headquarters of Renault.
- **1929:** The first Renault factory is built on Île Seguin.
- **1930:** First vehicles are produced at the Seguin factory.
- **1936:** Series of large labor strikes disrupt business and life in Paris, and are dealt with violently. The power of the French Communist Party increases.
- **1945:** WWII ends and Renault is nationalized by the 4th French Republic as *Régie Nationale des Usines Renault*, in part to punish Louis Renault for his alleged collaboration with the Nazis.
- **1947:** Renault launches the 4CV, one of the most significant cars in European history.

- **1968:** May 68, a series of strikes and civil unrest erupts across France. Much of the conflict and activity is centered on Billancourt, now a known symbol of labor and industry and nicknamed "The Workers' Fortress."
- **1972:** Pierre Overney, a left-wing activist is shot dead by a Renault security guard.
- **1975:** Bâtiment X, at this point known as the "Pierre Dreyfus Building," ceases to function as the headquarters of Renault.
- **1986:** *The Billancourt Ten*, a group of union activists, occupy the Pierre Dreyfus Building after a labor dispute, leading to their suspension.
- **1992:** The last car produced by the Billancourt factory rolls off the lot.
- **2004-2005:** The Renault factories are demolished in preparation for a new urban scheme and cultural hub.

1.5 Relevant Agencies and Frameworks

The brief has been written with consideration for the General Inventory and Artistic Treasures of France, the Direction Régionale de Affaires Culturelles, SPL Val de Seine Aménagement, and local trade unions. These bodies should be consulted throughout the planning and design process by any firms involved in the construction of the museum.

2. Context & Heritage

2.2 Renault

Renault was founded in 1899 by Louis Renault and his brothers Marcel and Fernand after building their first car in his father's garden shed the year prior. By 1903 the brothers quickly started producing more cars, building their own engines, and participating in the growing motorsport scene, building the company's profile. Renault grew quickly, building cars for the French military and city taxis throughout the early 20th century. Shortly before WWI, Louis took sole control of the company and soon after the end of the war Louis acquired all of Île Seguin to build his mega-factory, inspired by his

visit to the Ford Motor Company in the United States.⁷ From here Renault continued to expand its industrial footprint constructing factory buildings, administrative buildings, lodgings, etc, up to the water's edge in Billancourt, in the area known as the Trapezium, as well as on the entirety of the island across. The sheer magnitude and efficiency of Renault's factories would become one of the greatest industrial achievements and symbols of France in the 20th century.

The amount of specialized and unskilled labor required made it the hub of the century's labor conflicts. The French Communist Party saw an opportunity in Billancourt to establish an ideological base, and the strikes of 1936 further fueled their membership and cause.⁸ The violent handling of this strike had the secondary effect of leaving Louis Renault with very few political allies after WWII, and in 1945 he was accused of collaboration with the Vichy Government. Renault was nationalized as *Régie Nationale des Usines Renault*, Louis was arrested and jailed, and he died soon after.⁹ Despite Louis Renault's death, under the new leadership of Pierre Lefauchaux, Renault saw one of its most productive eras in the 50s and 60s, launching the iconic 4CV and later the Renault 4 and Renault 8. The unrest of May 68 further solidified the myth of the "Workers' Fortress" of Billancourt Renault factories. The Renault factories became a hotbed of union and labor activism, socialist propaganda, and ideological battles, as laborers fought to save jobs from moving out of France and improve working conditions. Although the nationwide unrest subsided by June of the same year, activist activity continued through the 70s and 80s, with Renault again at the center of violence, controversy, or both, highlighted by the

⁷ Albert Laprade, "The Ile Seguin Renault Factory," Architectuul, Paris, May 18, 2017, <https://architectuul.com/architecture/the-ile-seguin-renault-factory>.

⁸ Alain Viguier, "Renault Billancourt, 1950-1992: le parti communiste et les ouvriers. Identités ouvrières et identité de parti: identités ouvrières et identité de parti" (Histoire, Université Panthéon-Sorbonne - Paris I, 2017).

⁹ Viguier, "Renault Billancourt, 1950-1992: le parti communiste et les ouvriers. Identités ouvrières et identité de parti: identités ouvrières et identité de parti"; *Wikipedia*, "Renault."

murder of Pierre Overney by a Renault security in 1972 and the dismissal of ten union activists in 1986 after their occupation of the Pierre Dreyfus Building (Bâtiment X).

The interplay of innovation, labor, and the effects on the built environment helped to define Renault's place in history at Billancourt, and the industrial heritage present therein. And yet today, there is only a single vestige of the industrial city that once stood there, the Pierre Dreyfus Building. The rest have been closed since the early 1990s and demolished in 2004, clearing enormous swaths of land for new urban projects, Billancourt Park, and the development of Île Seguin.

2.3 Louis Renault's Cabin and The Pierre Dreyfus Building (Bâtiment X)

The remaining site is mostly square despite an undeveloped "tail" of land that reaches towards the bridge connecting Billancourt to Île Seguin. Beyond two original yellow brick gates is a handsome garden with four to five large trees shading a reconstruction of the shed in which Louis Renault built his first car.¹⁰ The contemporary recreation mirrors the original's simple squat construction. Two rectangular windows on the facade frame the door. The roof consists of clay tiles. And there is a "wattle and daub" (likely concrete) extension with a steeply slanting roof and small chimney. Although not the original workshop, its symbolism in relation to the former corporate headquarters behind it, and to the proposed new museum building, is a critical aspect of the historic narrative to be told by the project. Renault's massive, celebrated, and even controversial place in French history, has very humble beginnings.

The Pierre Dreyfus Building, formerly known as Bâtiment X and named now after the CEO from 1955–1975, served as the corporate headquarters of Renault from 1928 to

¹⁰ Alexis Monnerot-Dumaine, "La Cabane de Louis Renault," *Le Village de Billancourt*, 2020, <https://levillagedebillancourt.fr/2020/03/04/la-cabane-de-louis-renault/>.

1975, following its construction in 1922. It is 80 meters long and two storeys tall. It is symmetrical in form with 23 window bays across the front facade. The bottom floor is largely unadorned, consisting entirely of taupe-toned brick and concrete lintels across the windows, above which are recessed, undecorated panels. Each of the bays is separated by a shallow pilaster of a pseudo-doric order, but with more detail on the capitals. The middle three bays are set slightly forward to constitute the entrance of the building and framed by larger structural elements reminiscent of towers. They lack a lower level window bay helping to visually separate the entrance from either wing. The upper floor is constructed of a more yellowish brick giving a hint of vertical separation. Above the upper story windows sits a rather detailed entablature that references classical elements. The frieze above the entrance bears a panel with the names "Renault" and "Regie National." Along the wings, the frieze sports square decorative 'glyphs' above the pilaster capitals. The entrance 'towers' each have a keystone above their windows, a circular decorative panel above that, and two corbels with some protruding brickwork. The cornice features modillions along its length. The roofline starts slightly above the cornice, and rhythmically increases in height in alignment with each pilaster, providing a crenelated appearance. These stylings are consistent around the side and rear elevations of Bâtiment X.

Together these two buildings are deemed to be of high heritage importance, more so for their historical and cultural value than strictly their architectural form, although the Pierre Dreyfus Building is a fine piece of early 20th century administrative architecture worthy of further conservation. The garden itself warrants conservation in spirit, although the current garden does not reflect the original layout and thus is of medium historic value.

2.4 Vehicles and Innovation

There are numerous cars and vehicles important to the legacy of Renault ranging from wartime vehicles, to passenger cars, to highly advanced racing vehicles. Renault continues to innovate in both the world of transportation and motorsport and so the building employed to house and showcase these vehicles should be open, flexible, large, and changeable, to tell a continually evolving story of Renault's contribution to the automotive industry.

Some of the notable cars from Renault's history and likely to be included in the collection are below. Designs for the new building should take in account both how best to present these cars to the public and if the cars themselves should be reflected in design choices.

- Renault Voiturette - Louis Renault's first car¹¹
- Renault Type AG aka "Taxi de la Marne" - the first taxi made by Renault with significant WWI history¹²
- Renault AK 90CV - Winning car of the first Grand Prix motor event¹³
- Renault 4CV - First French car to sell 1,000,000 units and the first Renault vehicle produced after nationalization¹⁴
- Renault 4 - the world's first mass produced hatchback¹⁵
- Renault Alpine A442 - Winner of the 1978 *24 Hours of Les Mans*¹⁶

3. Museum Project^{17, 18}

3.1 Museum Project Objectives

Renault is one of the most important European car manufacturers, a motorsport icon, and is imbued with the history and memory of Paris' industrial legacy. Today, its last remaining building, beautiful in its own right, is not accessible to the public and is used as auxiliary office space for the brand. To serve both car and motorsport enthusiasts of the world, and bring to light the wealth of archival material in the possession of the Renault History department, the Pierre Dreyfus Building (Bâtiment X) plus a new contemporary building will become the new home of this dual museum experience.

The project will consist of a partial or full redesign and rescheming of the interior of Bâtiment X to provide gallery space and interactive media rooms that tell the architectural history of Billancourt and the social movements that occurred within the Renault factory walls. Additionally, this experience will re-illustrate the connection between Billancourt and Île Seguin, which has been visually dissolved outside. These spaces should accommodate photography, news clippings, models, artwork, and spaces for mixed media. The volume of the building is approximately 14,400 cubic meters for which to establish these rooms and areas.

The modern building commissioned by this brief, hereafter referred to as the "Design" building, will consist of a space large enough to showcase dozens of vehicles, machinery, and other innovations of Renault. This space should be dedicated to design

¹⁷ Spurstone Heritage Ltd and Kit Wedd, *Fashion Museum, Bath: Inspiring Minds, Creating Futures*, Project Brief (UK, 2024).

¹⁸ The following sections are inspired by and largely adapted from the Fashion Museum project brief by Spurstone Heritage Ltd. Section titles and general language has been borrowed in some instances where paraphrasing would result in a document of lesser professional quality.

and engineering and tell an interactive story of the evolution of Renault cars themselves.

Inspiration might be gleaned from similar successful automotive museums:

- The Ferrari museum in Modena has floor area of 5,200 square meters and houses 21 cars¹⁹
- The Audi museum in Ingolstadt has floor area of 9,600 square meters and houses 50 cars²⁰
- The Mercedes museum in Stuttgart has a floor area of 16,500 square meters and houses 160 cars²¹

This space is intended to incorporate a permanent collection of vehicles that can be viewed in the round, store additional vehicles and exhibits on site, and accommodate supplementary exhibits and interactive media opportunities. The primary gift shop and cafe should also be incorporated into the design of the new building.

An important aspect of the scheme should be the visual and thematic connection between the old and the new starting once a visitor enters through the historic Renault gates. Just as Louis Renault's legacy began in his tiny garden workshop, so too should the experience of guests. The garden space should act as a nexus connecting the buildings across time and space, and feature seating, sculpture, cars, wayfinding, and access to either or both experiences.

3.2 Audiences

The Renault History Foundation and Design Museum is intended to serve three primary audiences. The first and foremost is car and motorsport enthusiasts of all ages.

Renault is an iconic European brand as well as a noted F1 and Les Mans champion. In the

¹⁹ Amy Frearson, "Enzo Ferrari Museum by Future Systems," *Dezeen*, March 15, 2012, <https://www.dezeen.com/2012/03/15/enzo-ferrari-museum-by-future-systems/>.

²⁰ HENN, "Audi Museum Mobile | HENN," HENN.Com, June 8, 2000, <https://www.henn.com/en/project/audi-museum-mobile>.

²¹ Mercedes-Benz, "Mercedes-Benz Museum: Architecture," Corporate Website, Mercedes-Benz.Com, accessed April 21, 2026, <https://www.mercedes-benz.com/en/art-and-culture/museum/visitor-information/architecture/>.

vehicle collection are vintage cars, painstaking restorations, one of a kind models, champion race cars, and prototypes for the future. The museum will be the primary place for visitors to have a unique opportunity to see these cars upclose, underneath, and inside.

Secondly, because Renault is tied so closely to social movements that have defined industrial and labor practices throughout the world, in telling the history of Renault, one learns a critical history of Paris. According to the industrial heritage unit of General Inventory of Monuments and Artistic Treasures of France, industrial buildings represent only 1.7% of the 41,526 buildings protected under the law on historical monuments, and Bâtiment X is not even one of them.²² Thus, even though the “Workers’ Fortress” of Billancourt and Île Seguin have been lost, the impact they had on the built environment deserves to be shown. There are very few spaces in Paris today dedicated to the architecture of industry and a balanced narrative of the gains and sacrifices of the Parisian laborer.

Lastly, The Renault museum is intended to be a first-choice museum for children and families, much like the Cité des Sciences et de l'Industrie and other museums known for their rich visual, audio, and interactive experiences. We hope children are wowed by the cars on display and interactive exhibits, and parents can share in these experiences while learning something new for themselves as well.

²² Michel and Pitti, “27. Renault à Billancourt : des usines au(x) patrimoine(s), histoire d’une conquête et d’un effacement,” 10.

3.3 Access

Design for both Bâtiment X and the Design museum should be led with an accessibility-first process. Bâtiment X features an ornate central staircase, but the current lift experience should be reconsidered and an additional lift is necessary.

For the Design museum, movement and accessibility should be equal and equitable throughout the space. Not only are ramps an elegant solution to accessible movement, but they are well suited to the display of multiple large vehicles and models across a physical narrative. Additionally, any lift incorporated into the scheme should be considered a part of the Design museum experience itself, whether that be through mixed media, views, or mechanical marvel.

All other areas of the museum are expected to exceed the standard for physical, sensory, and intellectual access, including but not limited to: tactile displays and signage, audio guides, quiet spaces, maps and wayfinding, circulation space and size, etc.

3.4 Approach

The approach towards the museum should continue to use one of the two historic gates to the site along Rue Emile Zola. To the south is the river and Île Seguin, and to the west is Parc de Billancourt, both of which provide potential vistas from the original and new buildings. Many people will approach from the Sèvres/Meudon side and cross over Île Seguin using the pedestrian bridge. This is advantageous as it provides a safe and scenic route from which to approach the building, as well as thematically connecting the experience to the island itself which used to be occupied by factory buildings. The approach should communicate that the site is accessible to the public after being inaccessible for many years, and incorporate cars or models to communicate quickly the

contents of the museum. The site benefits from being surrounded by historic gates with widely spaced vertical bars allowing for visual penetration into the site and its contents before entering.

3.5 Arrival and Orientation

People should be guided towards whichever gate, which are both on the western side of the plot, makes the most sense within the overall design scheme. Security and ticketing can be incorporated into a tertiary structure just beyond or before the gate so as to not interrupt the experience once one enters the garden.

3.6 Storage and Backroom Space

Both Bâtiment X and the new building should have space dedicated to storing display material and exhibition needs. Bâtiment X should incorporate a means by which to move a car into the building and onto an upper floor if necessary. The new building where the most vehicles will be displayed, must have the capacity to store additional cars and machines, move them from storage onto the floor, and into and out of the building for outdoor display or building transfer.

3.7 Gift Shop and Cafes

The primary gift shop should be located in the new Design museum as this is likely to be the more visually stimulating of the two spaces and encourage more purchases. Two cafes or restaurants should be located on the site, with at least one inside the Design museum.

3.8 Lighting

Galleries within Bâtiment X should have lighting appropriate for the display of photography, archival material, and artwork. These spaces should not rely on natural lighting as a primary source of illumination.

The Design museum should be well lit for the display of cars, vehicles, and machinery. Natural light is an advantage in these spaces. However, glare off of metallic surfaces and heat gain should be considered in illumination schemes.

3.9 Galleries (General)

Galleries should be designed such that their light, sound, temperature controls, fire alarms, means of egress, and wayfinding are fitting for the type of content displayed.

Means of display can include wallspace, light boxes, operable drawers, glass encasements, and free standing objects. A number of galleries should incorporate some form of seating. The display of cars should enable 360 degree viewing where possible, either via the ambulation of people or the dynamic rotation of the cars themselves. Ceilings should be strong enough to hang heavy objects from where necessary. For example, the Design museum may wish to incorporate a WWI aircraft or an "exploded view" of a car, which would require suspension in some form.

3.10 Immersive Experiences and Media Spaces

Given that cars, planes, tanks, and industrial equipment are dynamic, functioning pieces, they cannot always be fully experienced through static display alone. Some exhibits will necessitate moving parts, film, and audio experiences (for example, an engine roaring). A significant portion of the galleries should be dedicated to, or

accommodate these types of displays. Technological considerations include, but are not limited to, high quality sound systems, seating, dark rooms, and high definition projections.

This brief also requires at least two large flexible spaces that can accommodate experiences fit for both children and adults such as simulators, VR experiences, reflex testers akin to those used by racecar drivers, and cars that visitors can sit inside.

3.11 Security

A security checkpoint should be incorporated into the entrance scheme. CCTV should be used throughout the site and buildings and monitored from the primary security checkpoint. Each building and the garden space should have at least one dedicated security staff for the safety of visitors.

3.12 Staff Access, Deliveries, and Administrative Entrance

The second of two historic gates can best be used for controlled access by staff, administration, and deliveries.

3.13 Other

All other aspects of hospitality, safety, environment, and management should adhere to best practice standards for contemporary museums and meet city guidelines. This includes the number and placement of restrooms, first aid availability on site, HVAC and environmental controls, IT requirements, break rooms, staff offices, coat and bag check, lockers, fire safety, and emergency procedure communications. Anything not mentioned in this does not necessarily preclude its requirement now or in the future.
